

This project was about finding a tool on Thingiverse and 3D printing the tool. I chose to print a spaghetti measurement tool. It had four different circles where you would put the uncooked spaghetti to measure out the amount you wanted. The tool functions pretty much as advertised, but the main problem with it is that there is no actual unit on the tool. The creator seemingly put no thought into the serving size for each one, aside from the fact that they increase in size. I used the tool a few times, and found that I was still pretty much just guessing how much spaghetti to use, but instead of just eyeballing it, I was guessing which circle I should use for the amount I wanted. If I were to change this tool, I would definitely either put serving sizes on it, or find out how much spaghetti is a good amount for me, and just put circles of that size. After using the tool a few times, I wanted to find a new use for it. I realized I could use the different sized circles and the edges of the tool itself, I could use it as a stencil for different sized circles, and I proceeded to use it to draw a strange Homer Simpson.
